

# macOS Connect to Network Drive

Note: Before you begin ensure you are logged on to the VPN

1. Open Finder and on the top menu bar select "Go" and then "Connect to Server..."

2. In the window that pops up copy or retype this address and hit connect

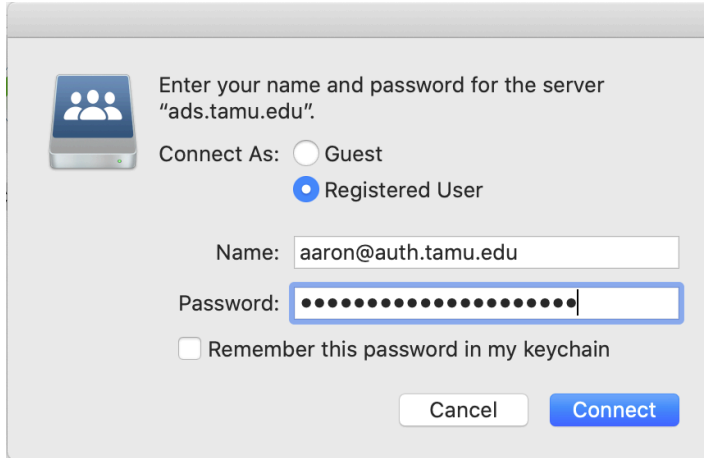

smb://ads.tamu.edu/Customers/TAMU/CLALS/entomology/Share

3. You will then get a login screen, type the following:

Username: [NetID@auth.tamu.edu](mailto:NetID@auth.tamu.edu)

Password: your normal netid password

The image shows a macOS login dialog box for connecting to a server. The title bar is grey. On the left is a blue icon of a server rack. The main text reads: "Enter your name and password for the server 'ads.tamu.edu'." Below this, there are two radio buttons: "Guest" (unselected) and "Registered User" (selected). Underneath, there are two text input fields: "Name:" with the text "aaron@auth.tamu.edu" and "Password:" with a series of black dots. At the bottom left is a checkbox labeled "Remember this password in my keychain" which is unchecked. At the bottom right are two buttons: "Cancel" and "Connect".

4. Assuming that worked you should get a listing of the S drive folders you have access to.
