

# YOUTH ADVENTURE PROGRAM ENTOMOLOGY CAMP

For **RISING 7th - 10th grade students**

**CAMP DATES: JULY 13 - 18, 2025**

**Registration Opens in January 2025**

Ever wanted to learn more about bees, beetles, butterflies, and other “f-ant-astic” bugs?

Get ready for a journey into the exciting world of insect science! In the Entomology course, students will discover “un-bee-liveable” ways insects interact with their environments, their significance to human society, and different careers in the field of entomology.

Students will “spread their wings” and gain practical, field- and laboratory-based skills through hands-on activities, experiments, and expeditions to distinct habitats. Students will collect, identify, and preserve insects to create their own unique insect collections.

Time will “fly” when exploring special topics like honey beekeeping, edible insects, and the fields of forensic, medical, and veterinary entomology. By the end of this course, students will know the basics of insect diversity, biology, behavior, morphology, and ecology, and how to pursue their passion for insects through high school and beyond!
